; Patent No. 5976873
; GENERAL INFORMATION:
 APPLICANT: Whitsett, Jeffrey A.
 TITLE OF INVENTION: Nucleic Acid Sequences
 TITLE OF INVENTION: Controlling Lung Cell TITLE OF INVENTION: Specific Gene Expression
 NUMBER OF SEQUENCES: 76
 CORRESPONDENCE ADDRESS:
 ADDRESSEE: Caralla, Byrne, Bain, Gilfillan,
 ADDRESSEE: Cecchi, Stewart & Olstein
 STREET: 6 Becker Farm Road
 CITY: Roseland
 STRAET: New Jersey
 COUNTRY: USA 0.4%; Score 13.4; DB 1; 93.3%; Pred. No. 8.3e+02; tive 0; Mismatches 1;

GENERAL INFORMATION:
APPLICANT: Lambowitz, Alan
APPLICANT: Mohr, Georg
APPLICANT: Zimmerly, Steven
APPLICANT: Zimmerly, Steven
APPLICANT: Guo, Huatao
TITLE OF INVENTION: Methods Cleaving DNA with Nucleotide
TITLE OF INVENTION: Integrases
NUMBER OF SEQUENCES: 12
CORRESPONDENCE ADDRESS:
ADDRESSER: Calfee, Halter & Griswold
STREET: 800 Superior Avenue, Suite 1400
CITY: Cleveland
STATE: Onlo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           SOFTWARE: Patentin Release #1.0, Version #1.30 CURRENT APPLICATION DATA: APPLICATION NUMBER: US/09/031,897

Sequence 69, Application US/09071433A

Patent No. 61978484

APPLICANT: Bennett, C. Frank

APPLICANT: Densett, Lex M

TITLE OF INVENTION: Antiense Modulation of CD40 Expression

FILE REFERENCE: RTS-0002

CURRENT FELLING DATE: 1988-05-01

NUMBER OF SEQ ID NOS: 91

SOFTWARER: Patentin Ver. 2.0

SEQ ID NO 69
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ouery Match 0.4%; Score 13.4; DB 1; Length 18; Best Local Similarity 93.3%; Pred. Patent No. 364398
GENERAL INFORMATION:
APPLICANT: Pavco, Pamela
APPLICANT: Rescoed, James
APPLICANT: Stinchcomb, Dan T.
APPLICANT: Escobedo, Jaimes
TITLE OF INVENTION: RELATED AND REAGENT FOR THE
TITLE OF INVENTION: TREATHENT OF DISEASES OR
TITLE OF INVENTION: CONDITIONS RELATED TO LEVELS
TITLE OF INVENTION: OF VASCULAR ENDOTHELIAL
TITLE OF INVENTION: GROWTH FACTOR
NUMBER OF SEQUENCES: 8502
CORRESPONDENCE ADDRESSE:
ADDRESSEE: Lyon & Lyon
STREET: Suite 4700
STREET: Suite 4700
           TELECOMMUNICATION INFORMATION:
TELEPHONE: (212) 840-3333
TELEPAN: (212) 840-3132
INFORMATION FOR SEQ ID NO: 54:
SEQUENCE CHARACTERISTICS:
LENGTH: 18 base pairs
TYPE: nucleic acid
STRANDEDNESS: single
TOPOLOGY: linear
MOLECULE TYPE: CDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   COMPUTER READABLE FORM:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   RESULT 1076

US-09-325-554-18

US-09-325-554-18

Sequence 18, Application US/09325554

Patent No. 6410235

GENERAL INFORMATION:

APPLICANT: Weindel, Kurt

APPLICANT: Weindel, Joachim

TITLE OF INVENTION: DNA DETECTION BY MEANS OF A STRAND REASSOCIATION COMPLEX

FILE REFERENCE: 024420-00008

FULLE REFERENCE: 024420-0008

CURRENT FILING DATE: 1999-6-04

PRIOR APPLICATION NUMBER: 198-24-900.4

PRIOR APPLICATION NUMBER: 198-24-900.4

PRIOR APPLICATION NUMBER: 198-6-04

NUMBER OF SEQ ID NOS: 18

SOFTWARE: Patent-In version 3.1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

Sequence 18, Application US/10102720

Batent No. 679623

GENERAL INFORMATION:

APPLICANT: Weindel, Kurt

APPLICANT: Brand, Joachim

TITLE OF INVENTION: DNA BETECTION BY MEANS OF A STRAND REASSOCIATION COMPLEX

FILE REFERENCE: 101614-00014

CURRENT APPLICATION NUMBER: US/10/102,720

CURRENT APPLICATION NUMBER: 09/325,554

PRIOR PILING DATE: 1999-06-04

NUMBER OF SEQ ID NOS: 18

SOFTWARE: Patent-In version 3.1

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 29, Application US/08347563A

Sequence 29, Application US/08347563A

Patent No. 5935810

GENERAL INFORMATION:
APPLICANT: THE ROCKEFELLER UNIVERSITY
TITLE OF INVENTION: MODULATORS OF BODY WEIGHT, CORRESPONDING NUCLEIC
TITLE OF INVENTION: MODULATORS OF BODY WEIGHT, CORRESPONDING NUCLEIC
TITLE OF INVENTION: ACIDS AND PROTEINS, AND DIAGNOSTIC AND THERAPEUTIC USES THEREC
NUMBER OF SEQUENCES: 38
CORRESPONDESS:
ADDRESSEE: Klauber & Jackson
STREET: 411 Hackensack
STREET: 411 Hackensack
CITY: Hackensack
STATE: New Jersey
COUNTRY: USA
ZIP: 07601

CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/53,619B
FILING DATE: December 1, 1995
CLASSIFICATION: 800
ATTONNEY/AGENT INFORMATION:
NAME: Marcus-Wyner, Lynn
REGISTRATION NUMBER: 34,869
REFERENCE/DOCKET NUMBER: 137-1082/PCT
TELEPHONE: 415/857-1125
TELEPAK: 415/857-1125
INPORMATION FOR SEQ ID NO: 24:
SEQUENCE CHARACTERISTICS:
                                                           Sequence 24, Application US/08553619B
Patent No. 5919705
GENERAL INFORMATION:
APPLICANT: DeHean, Petrus T.
TITLE OF INVENTION: Virus Resistant Plants
NUMBER OF SEQUENCES: 30
CORRESPONDENCE ADDRESS:
ADDRESSEE: No. 5919705artis Crop Protection
STREESFE: 975 California Avenue
CITY: Palo Alto
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            COMPUTER READABLE FORM:
